

DOING.AI

Make every project visible.

Your local-first AI Project Operations workspace.

LOCAL-FIRST

Your data lives on your machine. Always available, never leaked.

AI-AUGMENTED

Local LLM enrichment for every entity — never to the cloud.

TEAM-AWARE

Real-time SSE sync across your collaborators.

01

YOUR LOCAL-FIRST WORKSPACE

WELCOME

A quick orientation to what DOING.AI is, the three pillars that shape every screen, and how to use this booklet.

01 · WELCOME

What is DOING.AI?

DOING.AI is your team's local-first AI Project Operations workspace. It brings together every moving part of your innovation portfolio — projects, technologies, repositories, hackathons, MCP servers, AI agents, working groups, and personal todos — under one dark, keyboard-friendly canvas. Your data lives on your machine; nothing is shipped to the cloud unless you explicitly export it.

Every entity is enriched by your locally configured language model — descriptions, summaries, briefs, risk assessments. The same LLM powers a built-in assistant that answers questions about the state of your portfolio in plain English. Whatever your role, DOING.AI surfaces the right amount of detail for the work you actually do.

THE THREE PILLARS

LOCAL-FIRST

localStorage + db.json on your network. Real-time sync over SSE between teammates. Zero cloud dependency.

AI-AUGMENTED

Plug your Ollama, LM-Studio, or n8n endpoint. Every prompt template is editable. Models never see public internet unless you wire it that way.

TEAM-AWARE

Four roles (admin / manager / contributor / viewer) shape every screen via a centralised permission matrix.

HOW TO READ THIS GUIDE

Sections 03–06 walk through what you can do in each part of the app. Annex A explains how it all fits together; Annex B is the full permission matrix; Annex C is for keyboard-loving users.

02

NAVIGATE WITHOUT FRICTION

WORKSPACE

The three regions of the workspace, how the sidebar is organised, and the always-on AI surfaces.

02 · WORKSPACE TOUR

Three regions, one keyboard

The DOING.AI workspace has three regions: the sidebar on the left (your navigation), the main canvas (where the work happens), and the top bar (where the AI companion and command palette live). All three are keyboard-first.

The sidebar navigation menu is shown in dark mode. It includes the DOING.AI logo, a 'SERVER LIVE' status indicator, and a list of navigation items: DASHBOARD, PROJECTS (highlighted in orange), TIMELINE, RISK HEATMAP, COMMUNICATIONS, TECHNOLOGIES, REPOSITORIES, HACKATHONS, MCP HUB, AI AGENTS, WORKING GROUPS, WEEKLY CHECK-IN, SMART TODO, WISH LIST, and USER GUIDE. At the bottom is a user identity card for JANE DOE, CONTRIBUTOR.

- 1 Live sync indicator**
Green = your backend is reachable and pushing real-time updates.
- 2 Functional groups**
Items are grouped by what they DO: management, catalogs, collaboration, tools.
- 3 Active highlight**
The current screen is highlighted in brand orange.
- 4 Your identity card**
Always visible. Click the key icon to change your password; the door icon to sign out.

LIGHT OR DARK?

Use the moon/sun toggle in the bottom-left to switch themes. Your preference is remembered per device. Most users keep DOING.AI in dark mode and run lighter apps side-by-side for contrast.

03

WHERE THE WORK LANDS

PROJECT

Projects,
Timeline, Risk
Heatmap,
Communications
— the four
screens that drive
day-to-day
delivery.

G1 · PROJECT MANAGEMENT

Projects

The heart of your portfolio.

WHAT IT DOES

Each project lives as a rich record: description, context, manager, members, tasks, milestones, tags, technologies, repositories, audit log. Status, dev stage, and innovation maturity are all first-class. Use the inline AI button to generate a structured project brief or a 1-page exec summary from your notes.

KEY ACTIONS

- Create a project from scratch, from a template, or by importing raw notes via AI.
- Assign a manager and members; the assignment opens visibility for them.
- Add tasks with priority, ETA, weight, and dependencies — they roll up to the timeline.
- Flag a project as "important" or "archived"; filters everywhere honour those flags.
- Drop a presentation URL or linked-app reference for stakeholder-ready context.

PRO TIP — USE THE FAMILY FIELD

Group projects under a Family (e.g. "AI Efficiency", "Customer Experience"). The Dashboard breaks down KPIs by family, and the Wish List can reference them directly.

G1 · PROJECT MANAGEMENT

Timeline

A Gantt across the whole portfolio.

WHAT IT DOES

Every project becomes a bar from its start date to its deadline. Milestones appear as diamonds; tasks are nested rows. Filter by family, status, manager, or tag to focus on a slice, or zoom out to spot deadline clashes a quarter ahead.

KEY ACTIONS

- Drag a bar to shift a project window — the change persists immediately.
- Click a milestone diamond to mark it done or edit its date.
- Use the today line to spot what should land this week.
- Hover any bar for a 2-line tooltip with project status + manager.

PRO TIP — PRINT THIS VIEW

The browser print dialog (■P / Ctrl P) renders the timeline as a landscape PDF — perfect for a quarterly steering deck.

G1 · PROJECT MANAGEMENT

Risk Heatmap

Probability × Impact, at a glance.

WHAT IT DOES

Every project carries a risk profile. The Heatmap renders the whole portfolio on a 2D grid: probability on one axis, impact on the other. Hot zones glow brand orange so the highest-priority items pop. Hover any dot to inspect; click to jump into the project.

KEY ACTIONS

- Adjust a project's risk score inline — heatmap updates instantly.
- Filter by family to compare risk profiles across initiatives.
- Use the AI mitigation generator to draft a starter mitigation plan from any project's context.

PRO TIP — REVIEW WEEKLY

Treat the heatmap like a pre-meeting check. Anything in the top-right quadrant deserves a 60-second talk in your next stand-up — even if everything else is green.

G1 · PROJECT MANAGEMENT

Communications

Drafts, newsletters, weeklies — in one place.

WHAT IT DOES

Compose weekly status updates, monthly newsletters, exec committee briefs, or info posts. Target one or more mailing lists, attach the project context, and let the LLM draft the body from your bullet points. Track draft vs sent.

KEY ACTIONS

- Pick a template (weekly, newsletter, exco, info) — each has its own prompt.
- Attach related projects so the AI has full context when drafting.
- Choose mailing lists; the recipient count is computed live.
- Save as draft or mark as sent — the audit log preserves the trail.

PRO TIP — START FROM A BRIEF

On a project page, click "Generate exec brief". Copy that into a new Communication and the AI will tighten it into a 3-paragraph newsletter — no blank-page anxiety.

04

SHARED ASSETS • LIVING INVENTORY

CATALOG

Technologies,
repositories,
hackathons, MCP
servers, AI
agents — the
building blocks
the whole team
can reach for.

PUBLIC · CATALOG

Technologies

A living radar of your stack.

WHAT IT DOES

Catalogue every framework, library, database, language, or service your team has touched. Each entry carries a layer (frontend / backend / data / ML-AI / ...) and a maturity status (evaluating / adopted / deprecated / hold). Projects link to the technologies they use; the dashboard counts adoption.

KEY ACTIONS

- Add a tech in one click with name, category, layer, and maturity.
- Browse by layer or maturity; filter to "evaluating" to see your innovation funnel.
- Link a project to a tech — it appears on both pages.
- Use the AI enrichment to auto-fill description, version, license, and url.

PRO TIP — QUARTERLY TECH REVIEW

Once a quarter, scan the "Evaluating" tier with the team. Promote what stuck, deprecate what you stopped using. The catalog should reflect reality, not aspirations.

G2 · CATALOGS

Code Repositories

Source-control, mapped to projects.

WHAT IT DOES

A directory of every repo (Bitbucket, GitHub, GitLab, Azure) your team owns or contributes to. Visibility, provider, language, and project links are all first-class. The built-in AI provider scanner can bulk-import an entire workspace or org.

KEY ACTIONS

- Add a repo manually or bulk-import from your provider with a single token.
- Link a repo to one or more projects — appears on both records.
- Use the visibility chip to spot private repos at a glance.
- Search by language to find your Python or TypeScript estate in a click.

PRO TIP — KEEP IT ACCURATE

When you spin up a new repo, add it here the same day. A 30-second discipline; the catalog stays trustworthy for everyone else.

G2 · CATALOGS

Hackathons

From kick-off to retrospective in one place.

WHAT IT DOES

Run hackathons end-to-end: theme, objective, challenge, dates, location, participants (devs, SMEs, experts, PMs, designers), docs (briefs, guides, results), and a live message thread. The AI can synthesise outputs into a one-page wrap-up at the end.

KEY ACTIONS

- Plan with status (upcoming / active / completed / archived) and dates.
- Add participants with roles and teams; export the roster as CSV.
- Drop briefs and guides as docs; participants can author and edit.
- When done, generate the AI synthesis for a polished retrospective.

PRO TIP — LINK TO A PROJECT

If a hackathon produces something real, create a project AND a Wish List entry that references both. The lineage is captured forever in your audit log.

G2 · CATALOGS

MCP Hub

Your Model Context Protocol catalogue.

WHAT IT DOES

Every MCP server (the bridges that let LLMs call your internal systems) lives here. Each card carries description, tools, deploy status (dev / UAT / production), family, scope, data source, owning IT team, and an AI-driven code analysis with security/perf recommendations.

KEY ACTIONS

- Add a server declaratively or by URL — the Hub tries to inventory its tools.
- Group servers in families with a custom colour for cross-portfolio visibility.
- Run AI code analysis to surface security/perf issues — track fixes inline.
- Export a PDF booklet of the whole Hub for an exec committee.
- Filter by status, scope, or family; switch between list and grid views.

PRO TIP — SHARE WITH SPONSORS

The PDF booklet is purpose-built for non-technical stakeholders. One click, polished output, brand-consistent. Drop it in a Slack channel or attach to a steering deck.

G2 · CATALOGS

AI Agents

Track your internal agents from idea to production.

WHAT IT DOES

A purpose-built tracker that mirrors the MCP Hub but adds agent-specific fields: model, framework (LangChain, LlamaIndex, CrewAI, AutoGen, n8n, custom), system prompt, knowledge bases, tools, and release/eval history with operational metrics.

KEY ACTIONS

- Track agents through 6 stages: idea → design → dev → testing → production → deprecated.
- Link an agent to the MCP servers it depends on — cross-references appear on both.
- Capture monthly invocations, cost, success rate, user satisfaction for ops dashboards.
- Use families and tags to group by business domain (Support, Data, DevOps...).

PRO TIP — LOG EVERY EVAL

After each regression run, add an evaluation record. Three months in, you have a real time series — quality and cost trends you can show to leadership.

G5 • ADMIN + IT FLAG REQUIRED

DATA PLA

Data Feeds —
silver-copy &
data-warehouse
pipeline registry.
Visible to admins
and users with
the IT flag
activated by an
admin.

■ RESTRICTED ACCESS — visible to Admin + users with the IT flag (Settings → Security)

C5 · DATA PLATFORM

Data Feeds

The silver-copy & data-warehouse pipeline registry.

Centralised registry of every data pipeline that feeds your silver copies and data warehouses. Each feed documents the source platform, data type, refresh frequency, source → destination mapping, go-live date, JIRA reference, cost in Man-Days, and who is responsible (PM + developer). This section is visible to admins and to users whose profile carries the IT flag.

TRACKED FIELDS PER FEED

■ Platform name	Source system — ex: Salesforce, SAP, Oracle	■ Production date	When the feed went live — ISO date
■ Data type	Nature of data — "CRM events", "Finance ledger", "HR"	■ JIRA ref	Ticket reference for full delivery traceability
■ Frequency	realtime / hourly / daily / weekly / monthly / on-demand	■ Cost (Man-Days)	Estimated delivery effort in person-days
■ Source	Origin endpoint: DB, REST API, file export, streaming b	■ ETA	Expected go-live if not yet in production
■ Destination	Silver copy table or DWH schema name	■ Project Manager	PM name — free-text
■ Status	planned → in_dev → uat → production → deprecated	■ Developer	Developer name + optional link to a presentation

WHO CAN ACCESS THIS SECTION?

Data Feeds is visible to admin users AND any user whose profile has the IT flag enabled. An admin can toggle the IT flag per user in Settings → Security → user row. Non-IT users simply do not see this menu item in the sidebar.

05

WORKING TOGETHER, ASYNCHRONOUSLY

COLLABORATION

Working Groups
for standing
squads and
Weekly Check-in
to keep the team
rhythm.

G4 · COLLABORATION

Working Groups

Standing squads with memory.

WHAT IT DOES

A working group is a long-running, cross-functional squad. Each carries an objective, a roster (lead / contributor / observer), a task board (Kanban with priorities and checklists), and meeting notes with decisions and action items that carry across sessions.

KEY ACTIONS

- Create a working group; invite members with role.
- Run sessions: capture an agenda, notes, decisions, and action items.
- Action items carry forward — open ones surface in the next meeting prep.
- Track tasks in a focused board (todo / doing / review / done).

PRO TIP — CLOSE THE LOOP

At every session, do a 2-minute "carried action" review. The system shows you what was opened last time. Nothing falls through the cracks.

G4 · COLLABORATION

Weekly Check-in

Two minutes, every Monday.

WHAT IT DOES

A short structured form: accomplishments, blockers, next steps, mood (green / amber / red). Submit it; it shows up on the team dashboard and feeds the AI weekly digest.

Skipping a week triggers a friendly nudge in your notifications.

KEY ACTIONS

- Reuse last week as a starting point — only edit what changed.
- Set mood with one click; the dashboard shows team weather at a glance.
- Read peers' check-ins in the dashboard digest for async stand-up vibes.

PRO TIP — BLOCK 2 MINUTES MONDAY MORNING

Make it the very first thing. Same time every week. After a month, it's automatic and your manager has constant, low-overhead visibility.

06

YOUR SPACE INSIDE THE WORKSPACE

PERSONAL

Smart ToDo for everything that doesn't deserve a project, and the Wish List for what you want from the team.

PUBLIC · PERSONAL

Smart ToDo

A personal task tracker with AI-grade structure.

WHAT IT DOES

For anything that isn't a full project but still needs tracking. Each item carries requester, sponsor, priority, Eisenhower quadrant, energy required, estimated duration, planning horizon (today / week / month / quarter / year), and dependencies. The AI helps extract structure from a single sentence.

KEY ACTIONS

- Create todos in one line; the AI parses dates and priority.
- Plan by horizon (today vs this week vs this quarter) — the focus mode hides the rest.
- Track time spent vs estimated — useful for personal calibration.
- Mark recurring tasks with a recurrence rule; new instances roll forward automatically.

PRO TIP — SPONSOR FIELD MATTERS

When a todo has a sponsor, you can resurface "what does this person need from me" in two clicks. Big psychological win when you start a tough conversation.

PUBLIC · TEAM BACKLOG

Wish List

Document your needs. Find your sponsor.

WHAT IT DOES

A collective backlog where anyone can submit a need — a new project, an MCP server, an AI agent, a data feed, a feature, an integration. Each wish carries a sponsor, dates, business justification, expected impact, and a comment thread for triage.

KEY ACTIONS

- Submit a wish in 30 seconds — title + description + category is enough to start.
- Pick an internal sponsor from your colleagues, or free-text an external name.
- Cross-link to existing projects, MCPs or agents — the dropdown is category-aware.
- Comment on anyone's wish; track status (submitted → accepted → in progress → done).

PRO TIP — SPONSOR BEFORE YOU SUBMIT

A quick 5-minute chat with your potential sponsor before you submit dramatically increases acceptance. The Wish List is the contract; the conversation is the trust.

07

YOUR LOCALLY HOSTED BRAIN

AI COMPANION

Three AI
surfaces, one
model, zero cloud
calls. Everything
you ask stays on
your network.

PUBLIC · **■K**

Your AI Companion

A locally-hosted brain that knows your portfolio.

DOING.AI ships with three AI surfaces. All of them route to YOUR configured local LLM (Ollama, LM Studio, or any OpenAI-compatible endpoint). Nothing leaves your network.

DOING Assistant

Open the chat from the top bar. Ask "what slipped this week?", "summarise the AI Efficiency family", "draft a stakeholder email for project X" — the assistant has your filtered portfolio in context.

AI Executive Insight

A single-click portfolio brief generator. Click the orange "AI EXECUTIVE INSIGHT" button in the sidebar to get a structured paragraph fit for an Exco deck.

Command Palette

Press **■K** (or Ctrl+K). Fuzzy-jump to any view, search a project by name, or trigger a recently-used action. Faster than your cursor will ever be.

WHEN THE ASSISTANT GETS STUCK

Open Settings → Local LLM (or ask an admin) to verify the connection. The assistant shows a single error toast and stays usable for browsing the rest of the app.

08

STAY ON TRACK, STAY YOU

NOTIFICA

How the
workspace
nudges you back
when you drift,
and how to keep
your account
safe.

PUBLIC Stay on track, stay you

How DOING.AI nudges you, and how to keep your account safe.

NOTIFICATIONS

The Bell tells you when...

A project you own or are a member of has been silent for more than 10 days. A task assigned to you slipped past its ETA. You haven't submitted a weekly check-in in over a week. The unread count appears as a red badge on the bell icon in the sidebar — click to open the centre and dismiss.

PROFILE & SECURITY

In your hands

Click the KEY icon next to your name in the bottom-left to change your password at any time. The form asks for your current password, then a new one (minimum 8 characters; a strength bar guides you to "Strong"). Passwords are hashed with PBKDF2-SHA256 — never stored in plain text.

THEME

The moon/sun toggle next to the bell flips the entire workspace between dark (default) and light. Your choice is remembered locally per browser. Most regular users prefer dark mode for long sessions.

FORGOT YOUR PASSWORD?

Ask an admin in your team to use Settings → Security to send you a temporary password. You will be forced to choose a new one at the next sign-in.

09

HABITS THAT COMPOUND

TIPS & BE

Six habits that,
over a quarter,
make the
workspace feel
like a second
brain.

GROW INTO IT

Habits that compound

Update your weekly check-in every Monday

It takes two minutes and feeds the team's rituals, the dashboard, and any AI-generated portfolio briefs. Skip a week and the alert banner appears in your sidebar.

Live in the command palette

Press **⌘K**. Type three letters. Jump. Faster than any menu, every single time.

Treat the AI as a brain dump partner

Paste in raw meeting notes, drop a competitor URL into a description, or ask the assistant "what should I prepare for the Friday review?" — it has read access to your portfolio.

Tag aggressively, file lightly

Two short tags (e.g. customer-experience, machine-learning) beat one paragraph of taxonomy. The dashboard and search both lean on tags.

Use the Wish List instead of side-channel asks

Need an MCP for system X? A new data feed? Drop it into the Wish List with a sponsor. Your sponsor and the admins see it the same day; conversations live next to the request.

Treat the dashboard like a daily standup mirror

Five minutes a morning. Anything red, you act on. Anything green, you ignore. That's it.

HOW IT IS BUILT

ANNEX · A

The local-first,
three-tier system
that puts you in
full control of your
data.

ANNEX A · TECHNICAL

How the workspace fits together

DOING.AI is a local-first three-tier app. Everything below your browser runs on hardware YOU control — there are no third-party SaaS dependencies in the critical path.

WRITE PATH

You mutate a field. React updates state, writes to localStorage IMMEDIATELY, then debounces a POST to /api/data 400 ms later. The backend uses X-Base-Version for optimistic concurrency; on conflict the local state wins until you act.

READ / SYNC PATH

Server pushes a "data_updated" event over SSE the moment any client writes. Other tabs refresh in < 100 ms. Polling every 30 s acts as a safety net. Pending local edits always win — never silently overwritten.

B

WHO SEES WHAT

ANNEX · P

The centralised
role × group
matrix that every
screen in the
workspace
consults.

ANNEX B · ROLES

The Role × Group matrix

Every screen in DOING.AI consults the same permission module to decide what to show. There are four ROLES, and the app is organised into five functional GROUPS. The cells below tell you what each role can do in each group.

ROLE	G1 — MGMT	G2 — CATALOGS	G4 — COLLAB	PUBLIC
admin	all view · edit · AI	all view · edit · AI	all	all
manager	all view · edit · AI	all view · edit · AI	own view · edit · AI	all
contributor	own view · edit · AI	all view, own edit/AI	own view · edit · AI	all
viewer	own view (no edit/AI)	all view, own edit (no AI)	own view · edit (no AI)	all

GROUP GLOSSARY

G1	Project Management	Projects, Timeline, Risk Heatmap, Communications.
G2	Catalogs	Code Repositories, Hackathons, MCP Hub, AI Agents.
G4	Collaboration	Working Groups, Weekly Check-in.
PUBLIC	Open to all	Dashboard, Technologies, Smart ToDo, Wish List, User Guide.

WHAT "OWN" MEANS

For projects: "own" = you are the manager OR a member. So if an admin assigns you to a project, it becomes visible to you even if you didn't create it. Same logic for working groups (owner + members) and for the catalogs (creator only).

C

KEYBOARD + GLOSSARY

ANNEX · S

For the
keyboard-first
user and anyone
new to the
vocabulary.

ANNEX C · QUICK REFERENCE

Keyboard shortcuts & glossary

KEYBOARD SHORTCUTS

■ K / Ctrl K	Open the Command Palette (fuzzy navigation + project jump).
Esc	Close any modal, dialog, or dropdown.
Enter	Confirm in dialogs; send in the assistant chat; submit forms.
Shift + Enter	New line inside the assistant chat (without sending).
Tab / Shift + Tab	Move between form fields. The app is fully keyboard-navigable.

GLOSSARY

MCP	Model Context Protocol — the standard for letting LLMs call external tools.
Agent	An autonomous (or semi-autonomous) AI program with a goal, tools, and prompts.
Family	A grouping label (e.g. "AI Efficiency") that bundles related projects or MCPs together.
SSE	Server-Sent Events — the one-way push channel the backend uses to broadcast updates.
Silver copy	A clean, query-ready copy of source data in a data warehouse.
Working Group	A standing cross-functional squad with its own tasks, meeting notes, and decisions.
Wish	A documented need (project / MCP / agent / feature) routed to a sponsor for triage.

Local. Fast. AI-augmented.

Yours.

You now know what DOING.AI can do for your team. Keep this booklet handy for new joiners, or jump back into the in-app User Guide whenever you need a quick reminder — the content there is always the live source of truth.
